SUMMARY

Computer Science undergraduate at Obafemi Awolowo University, working professionally as a backend engineer alongside the degree. Mostly TypeScript — NestJS, PostgreSQL, Prisma — with the past year spent inside an OAuth 2.0 / OIDC identity provider and the products built on it. I work on the parts of a system where money, access control and session state have to be exactly right. Seeking a software engineering internship.

EDUCATION

B.Sc. Computer Science — Obafemi Awolowo University, Ile-Ife 2023 – Expected 2028
CGPA: 4.67 / 5.00
Coursework: Data Structures & Algorithms, Database Systems, Operating Systems, Computer Networks

EXPERIENCE

Full-Stack Engineer — Tekcify Remote | Oct 2025 – Present
OAuth 2.0 / OIDC identity provider, hosted auth UI, multi-product admin platform and account dashboard

- Own two-factor auth across six services: enrollment stages the TOTP secret and arms only on a verify-setup code, and lost-authenticator recovery proves email plus password, then burns its single-use token.
- Gave sessions a real expiry — authorize had re-minted the 30-day cookie on every visit. Stamped `auth_time` into the session JWT, honoured `max_age`, and closed the account-chooser bypass.
- Principal contributor to the internal admin platform: NestJS backend, Next.js console, access guards, redaction-aware audit interceptors, RBAC, and an HMAC-signed route gate that fails closed on unresolvable MFA.
- Closed two redirect-hijacking paths in authorize — an unvalidated `redirect_uri`, and a base URL read from spoofable `Origin / X-Forwarded-Host` that also seeded the social-login trust set.

Full-Stack Developer — Vouchmark Remote | Sep 2025 – Present

- Made the wallet ledger the single source of truth for money: a partial unique index over (user, purpose, amount) caps open checkouts at one, and a persisted gateway mode stops test charges crediting wallets that spend against live vendor APIs.
- Unified two independently maintained trust scores into one derived value, storing the monitoring adjustment separately so resynchronisation is idempotent and clamping cannot silently discard penalties.
- Built the embeddable reputation widget's security model — per-widget CSP frame-ancestors, `postMessage` pinned to the embedding origin, CSRF on the Google OAuth flow.

PROJECTS

Keyhold — Peer-to-Peer Property Marketplace 2026
NestJS · TypeScript · PostgreSQL · Prisma · Stripe · Next.js · React Query

- Gated escrow release by role and time — the seller only once the inspection window closes — and made settlement atomic across escrow, transaction and property status. Tests written against acceptance criteria caught a release that could fire twice.
- Modelled offers as a guarded state machine with authorisation enforced per transition, and built the frontend solo over a typed API layer with a Zod schema per resource.

Waypoint — Trip Booking Platform 2026
NestJS · TypeScript · PostgreSQL · Prisma · Amadeus GDS · ECharts · Next.js

- Integrated the Amadeus GDS behind a `TravelProvider` interface, and moved money off `Float` to `Decimal(14, 2)`: a total computed as `price × travellers` had accumulated binary drift on every multiplication. The provider is handed whole minor units.
- Decided seat inventory inside the booking transaction with a conditional decrement, so concurrent bookings cannot oversell a departure and a waitlisted cancellation cannot invent seats that were never taken.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Go, SQL
Backend: NestJS, Node.js, Express, PostgreSQL, Prisma, Drizzle, REST APIs, Redis, Jest & Vitest
Identity & Security: OAuth 2.0 / OIDC, PKCE, JWT & JWKS, RBAC, TOTP MFA, WebAuthn passkeys, CSP & CSRF, Stripe
Frontend & Tools: React, Next.js, Tailwind CSS, React Query, Zustand · Git, Docker, Vercel, Swagger
