

The SIWES window

Your details close one door and open a better one. **Big tech does not sponsor interns in EMEA** — Google's postings say so outright — so the 23 October deadline I flagged yesterday is not yours to chase. But OAU's **mandatory six-month SIWES** is a curricular internship, and “integral to your studies” is the exact wording Germany, Ireland and the Netherlands use to define who they will issue an internship permit to. **SIWES is the key that fits those locks.**

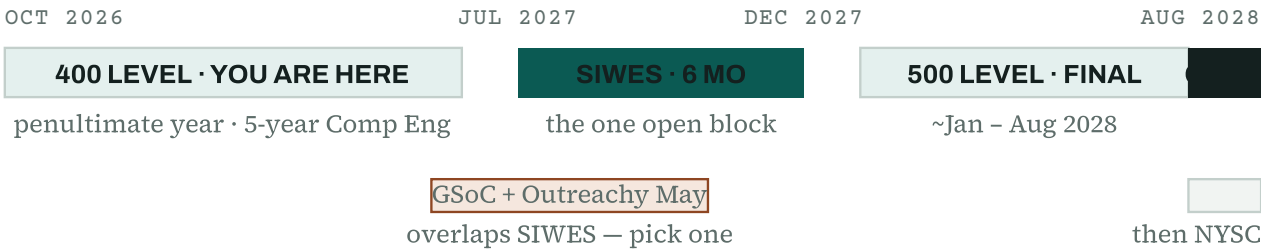

Correction to yesterday's plan — do not file the Google application

I told you to submit to Google EMEA by 12 September. That was wrong. Google's EMEA internship listings state that **immigration sponsorship will not be provided** and that applicants must already hold the legal right to work in the host country. Nigeria sits inside EMEA geographically, but that confers no right to work in London, Zurich, Dublin or Munich.

Sponsorship at those companies begins at **graduate level**, not intern level. For you that is the 2028 hiring round — real, and worth planning for, but not this month.

Your real calendar EVERYTHING HANGS OFF THIS

Computer Engineering is a five-year course, so **400 level is your penultimate year and you are in it now**. SIWES sits between 400 and 500 level — which is precisely why it is the only block you are institutionally free to spend abroad.

APPLY FROM NOV · DECIDE MID-FEB 2027 · VISA SLOT BY APRIL · DEPART JULY

CONFIRMED — AND IT FORCES A CHOICE

SIWES is **400 level**, starting around **July**, so the block runs roughly **July–December 2027**. That collides with both GSoC 2027 and the Outreachy May cohort, and **Outreachy explicitly forbids holding another internship concurrently**. You cannot do an abroad placement and Outreachy in the same block. The fork has to be settled by **mid-February 2027**, because an abroad placement needs applications out six months ahead and a Lagos visa slot booked by April.

DECISION TAKEN — TRAVEL

You have chosen a real placement abroad over a remote SIWES, so the department question is no longer the fork; it is now just paperwork. What you need from them instead is the **SIWES placement letter and formal recognition of a foreign host** — Germany requires that your university has prescribed the internship *and* accepts the specific company as fulfilling it. Ask the SIWES coordinator for both in your first weeks of 400 level, well before the November applications.

Tier 1 — routes that put you on a plane TRAVEL-FIRST • TWO OPEN NOW

You chose travel over remote, so these are ranked by **probability of actually departing**, not by pay. Two of them are open today and neither was in your calendar yesterday.

ROUTE	DEADLINE	COVERS	WHY IT WORKS FOR YOU
Max Planck CS institutes	1 NOV 2026 57 days	Salary + flights paid	Your single best shot. Informatics / Software Systems / Security & Privacy. Open to bachelor's students worldwide — no nationality gate , English only, no German. Salary covers housing and living, and arrival/departure travel is reimbursed. Typically 12–14 weeks but longer is possible — ask for six months to match SIWES and the \$16e cap. Results early March.
IAESTE Nigeria	Email now	Paid, course-related	Built for precisely this situation. Places technical and engineering students into paid, course-related internships abroad — roughly 120 slots a year for Nigerian students , across 100+ countries. You qualify: enrolled at a Nigerian university, 4+ semesters, aged 19–30. They provide visa assistance and accommodation. Cycle dates aren't published — email nigeria@iaeste.org .
Direct Pflichtpraktikum	Nov 26 - Feb 27	Varies	Apply straight to German employers on mandatory-internship terms: SAP, Siemens, Bosch, BMW, Deutsche Bank, plus Berlin tech — Zalando, Celonis, N26. Volume game; send many.
Ireland — IEP	Nov 26 - Feb 27	Must be paid	Computer Engineering is on the critical-skills list and SIWES satisfies the "integral to your degree" test. Unpaid placements are excluded, so the role must carry a salary.
DAAD RISE Germany	—	—	INELIGIBLE Restricted to students enrolled at North American, British and Irish universities. Ruled out — don't spend time on it.

WHAT TRAVEL-FIRST COSTS YOU — SAY IT PLAINLY

An abroad placement running July–December 2027 **rules out GSoC 2027 and the Outreachy May cohort**, which both run across that same summer, and Outreachy forbids a concurrent internship outright. That is real money forgone. Both are demoted to hedges in your calendar, not deleted.

THE ORDERING TRAP — APPLY TO THE HEDGE BEFORE YOU KNOW

Outreachy's initial application closes **mid-February**. Max Planck results arrive **early March**. So you must submit Outreachy *before* knowing whether you have a travel offer — and you should, because the initial application commits you to nothing. GSoC applications open after the Max Planck result, so that one you can decide with full information. LFX Spring (applications 15 Jan, term ~Mar–May 2027) finishes before departure and clashes with nothing — take it regardless.

Tier 2 — the SIWES placement WHERE A VISA IS ACTUALLY OBTAINABLE

Germany, Ireland and the Netherlands all require that an internship be *part of your degree*. Most applicants cannot satisfy that. **You can — SIWES is a mandatory, assessed component of an OAU degree**, and your department issues the placement letter that proves it.

ROUTE	LENGTH	REQUIRES	ASSESSMENT
Germany §16e	≤ 6 months	Enrolment + study-related	Best match. Six-month cap aligns exactly with SIWES. Uncapped numbers, needs Bundesagentur für Arbeit consent. Leads onward to the Blue Card and Opportunity Card after graduation.
Ireland — IEP	Up to 12 mo	Study outside IE + critical-skills field	Computer science is on the critical-skills list. Must be integral to the degree — SIWES qualifies. Unpaid placements excluded, so the role must pay.
Netherlands — trainee	Up to 12 mo	IND recognised sponsor	Workable, but the employer must already be an IND-recognised sponsor, which narrows it to larger firms.
UK · Canada · Singapore —		Treaty	CLOSED Youth Mobility, IEC and the Work Holiday Pass are bilateral. Nigeria is party to none. No application improves this.

NIGERIAN VISA LOGISTICS — START EARLIER THAN FEELS SENSIBLE

German national-visa appointments are booked through Lagos, with queues commonly running 4–10 weeks and long-stay categories often worse, plus roughly two weeks of processing after the appointment. Budget **three months from offer to departure**. Book the appointment the day an offer lands, before contracts are signed — the slot is the scarce thing, not the paperwork.

Tier 3 — August 2028, where sponsorship lives TWO WINDOWS, NOT ONE

The companies that refuse to sponsor interns sponsor graduates as routine. That is the prize, and your graduation timing lines up cleanly with the EU hiring cycle.

- **Aug–Oct 2027** (during SIWES): the first EU graduate window, for 2028 starts. Worth firing at, but it lands a year before you finish.
- **Aug–Oct 2028** (after graduating): the realistic one. Degree complete, GSoC or LFX on the CV, and a 2029 start that accommodates NYSC.

- **Germany's Opportunity Card** (Chancenkarte) lets you enter to job-hunt after graduating; the EU Blue Card sets a lower salary threshold for IT roles than for other professions.
- **Ireland's Critical Skills Permit** is the most Nigeria-accessible of the lot — 567 Irish permits went to Nigerians in the first eight months of 2026 alone.
- By then you will have **GSoC or LFX on the CV plus a real contribution history**, which is the differentiator these graduate pipelines actually screen on.
- **NYSC**. A year of national service normally follows a Nigerian degree and will sit between July 2028 and any overseas start date. Raise a deferred start early in the process — employers accommodate it far more readily when asked at offer stage than after.

Next 30 days UNCHANGED, AND STILL CORRECT

Nothing above changes the build phase. The applications were the part that moved; the contributions were always the real work.

1. **This week — email nigeria@iaeste.org**. One email, asks for the 2027 cycle dates and registration steps. Highest return per minute of anything on this page.
2. **By 30 Sep — Max Planck application drafted**. CV, transcripts, one referee. Deadline 1 November; ask explicitly for a six-month placement aligned to SIWES. Get your referee's agreement now, not in October.
3. **By 14 Sep — pick one org**. CNCF/Kubernetes recommended: it appears in LFX (×3 terms), GSoC and Outreachy, and Go is the strongest signal for the EU infrastructure teams you will target in 2028. Merged PRs are also what makes the Max Planck and IAESTE applications credible.
4. **By 21 Sep — it builds locally**, tests green. That is most of your 30 September milestone.
5. **By 30 Sep — first PR open**. A docs fix counts. The handshake matters more than the diff.
6. **October — Hacktoberfest**, but all four PRs into your chosen org. Scattering for the t-shirt buys nothing.
7. **November — the push**. Last full month before the 31 December target of 6–10 merged PRs.
8. **Alongside**: keep working `path.txt` — arrays, two pointers, sliding window, binary search cover most first-round screens, and they are what the 2028 graduate applications will test.

TIMETABLE PATCHED — 35 EVENTS, REBUILT 4 SEP 2026

Added the SIWES anchor and its three lead-up deadlines (apply Nov–Feb, decide mid-Feb, Lagos visa slot April), plus NYSC as context. Rewrote the August 2027 entry from “EU big-tech internships” to **graduate roles**, and marked the Outreachy December 2027 cohort as ineligible while you are enrolled. Re-import `dist/stipend-timetable.ics` — UIDs are stable, so it updates rather than duplicating. Original saved as `programs.json.bak-2026-09-04`.
